TEMPERATURE AND FLAME MEASUREMENT IN
THE BESSEMER PROCESS. [Aug 50] 8p. 13 refsx
Order from SLA mi\$1.80, ph\$1.80 60-18605

Trans. of Stahl und Eisen (West Germany) 1949, v. 69
[no. 22] p. 759-762.

A temperature measuring arrangement is described which permits of the temperature variation of basic Bessemer charges to be determined. With cold basic Bessemer blows an arrest occurs at 1500°C. Initial temperatures below 1200°C lead to heavy ejects. The relation between the recognized value P_{10} and the charge temperature is made clear. Simultaneous measurement of the bath temperature and of the radiation of the converter flame provides a relationship between the temperature of the charge at maximum radiation and its final temperature. The metallurgical significance of the radiation maximum is discussed.
